

Java provides several functions that make it useful and clear. When writing large programs that requires several operations, it is easy to write code that will look really complicated and hard to understand. Java has useful functions that make all this a lot simpler.

Java can also be complicated when one has not used it much. Java has a very big variety of functions and keywords that can be very new to beginners. Working with long codes in java is also difficult because many pieces of codes are connected and might seem a bit too complex.
